

N14518

American Cyanamid

RE: [REDACTED]

PRESENT COMPLAINTS: At the time of this examination this subject indicates that he feels fine and has no complaints.

GASTROINTESTINAL SYSTEM: He denies any GI complaints and denies feeling tired or weak.

RENAL: He denies any urinary complaints.

CARDIOVASCULAR: He denies shortness of breath, ankle edema or any discomfort in his chest.

NEUROLOGICAL: He denies any neurological symptoms.

Examination of the patient reveals no abnormal findings in the gums. There is no abdominal tenderness nor any abnormal findings. On neurological examination the achilles and patellar reflexes were normal. The Romberg test was normal. There was no evidence of a wrist drop. There was no impairment of sensations. The cardiovascular examination revealed the blood pressure to be 118/80 and the pulse rate was 72. The heart sounds were normal.

A review of the laboratory testing reveals some elevation of the BUN and of the Creatinine. The results of the spirometry would indicate the subject is able to wear a respirator. The complete urinalysis and complete blood count were within normal limits.

From this examination and other tests it is my opinion this employee may continue at work without increased risk or impairment of health from further exposure to lead.

Very Truly Yours,

Robert E. Boyd MD

Robert E. Boyd M.D.
