Albuquerque, New Mexico

Attention: Mr. Roy W. Thomas

Gentlemen:

I am enclosing prints of our drawing No. E 10966E showing inlet and discharge piping for a 30,000 CFM blower which is being installed in our power plant. We propose to insulate this pipe with 1" "Baurac" blankets, hy-rib metal lath on one side and stucco metal lath on other side. The hy-rib lath to be placed next to pipe to form an air space between pipe and insulation, wired in place and coated outside with "Insul-seal". This is to deaden sound caused by air passing thru pipe at high speed.

I am also enclosing prints of our drawings EP 7932 and EP 7970 showing insulation on a four section cottrell treater being built at this plant. The drawings give the specifications for this work.

Please favor us with quotations on these two jobs separately. The blower installation should be ready about December 1st and Cottrell job about January 1st.

I am enclosing a copy of our standard contract form. If you are successful bidder you will be expected to sign a contract with the Company on this basis.

If you require additional information, please feel free to let us know, and if you wish to inspect site we will be glad to have you do so when convenient.

Yours very truly,

J. W. ENGLISH
