November 25, 1970

Dear Sir:

You are a user of Monsanto's Therminol FR-2 or FR-3 in a high temperature fluid heat transfer system. Perhaps your Monsanto Fluids Specialist has advised you that these products will be discontinued effective December 31, 1970.

The product you can order as a direct replacement is Therminol FR-1.

Therminol FR-1 is chemically similar and completely compatible with Therminol FR-2 or FR-3. Therefore, Therminol FR-1 can be added as top up to your system. No changes in your system are necessary. You will continue to have a safe and efficient fluid heat transfer system.

Our reason for discontinuing Therminol FR-2 and FR-3 is limited acceptance in the market. This has occurred because Therminol FR-1 has been widely specified and purchased for systems requiring a fire resistant heat transfer fluid -- it is the more versatile product.

If you have questions, please call your local Monsanto office or me. We appreciate your interest in us and we want to continue to fill your orders with the best product in the best way.

Yours truly,

John R. Fallon

The attached letter has been sent to our Therminol FR-2 and FR-3 customers. It advises them of the discontinuance of these products. As indicated previously, Therminol FR-1 is a direct replacement and the user can top his system with no other changes necessary.

J. R. Fallon
