Gentlemen:

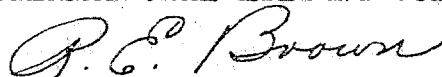

In looking through the literature on the toxicity of DDT, the writer noticed reference to work being carried out in your laboratory relative to this subject. We are aware that for some time past war restrictions have prohibited the publication of results of such studies but are not aware as to whether such restrictions are in force at the present time.

Specifically, we are interested in the application of DDT as an insecticide for use in flour mills and warehouses and would like to be sure that the compound does not have any ill effect on the product for human consumption.

We would be very grateful for any information you might be able to give us on this subject.

Very truly yours,

INTERNATIONAL MILLING COMPANY
