16th June 1969

Dear [redacted],

G.l.c. Analytical Methods & Wildlife

It is some years since we last held an informal discussion meeting to discuss the various problems, mainly analytical, that interested us all on pesticides and wildlife. Recently there has been renewed interest connected with the findings of P.C.B's in various samples, particularly in wildlife. It is suggested that we have a further meeting.

Topics for discussion include variations in the methods of analysis for P.C.B's especially on the quantitative side. There are the old twin problems of separation and confusion with other pesticides, mainly of the DDT group. It has been suggested that we have another informal group meeting to discuss the above problems and others that may arise on the 17th September at 10.30 am in room 225, Ministry of Agriculture, Fisheries and Food, Whitehall Place East, London S.W.

We would be pleased to see you or a representative from your laboratory at this meeting and if there are any specific points you wish to raise it could be helpful if you would let me know beforehand. You will see from the circulation list who else is being invited and again if there are any omissions or any particular person you think should come please let me know. It is hoped to send out an agenda at a later date.

Yours sincerely,

A. Taylor
