OSHA ASBESTOS STANDARD

Attached is information from Wilmington on the asbestos standard which may be pertinent to asbestos removal operations. I believe our recently issued asbestos handling procedure (Industrial Hygiene Procedure No. 10) and our annual physicals adequately address all of the points raised by J. R. Macconi of CD&P. You might want to pass this on to Arthur Bros. for their information.

For the purposes of determining the need for medical examinations, OSHA has recently (OSHA Program Directive 300-16) defined "exposure" as exposure to a minimum of 0.1 asbestos fibers longer than 5 micrometers per cubic centimeter.
