Subject: GE Mosquitos in FL & TX

Re: EPA reviewing plans to release Genetically Engineered Mosquitoes in Florida and Texas. Once released into the environment, they can't be recalled and will likely travel. I don't want to be part of the experiment!

I do not consent to the release of GMO Mosquitoes. They have already been shipped to Florida. The mosquitoes were developed by a British company called Oxitec using synthetic DNA based on the Herpes Virus and E.coli. There have been no environmental or human health studies and GMO mosquitoes cannot be recalled once they are released. Once they're out, there is no recall. Oxitec either can't or refuses to satisfy basic questions about the potential long-term environmental or health impacts of these lab-created insects. Not needed. Not wanted. Not proven safe.
