 Mr. E. B. Hollingsworth - Wilmington Gypsum

THIS COPY FOR

Enclosed is the Data Sheet and Technical Bulletin covering use and handling of Troysan.

It gives off organic vapors and is rated in the high toxic range. Cartridge type respirators, U. S. Bureau of Mines approved, must be worn when handling the salts, also when the salts are added to the mix. Instruct all personnel of its hazards and precautions that must be taken to prevent respiratory problems, skin burns, or irritations.

Also enclosed is the Threshold Limit Values, TLV, published in July and immediately effective. Several changes are noted, especially the TLV for fibered talc. It is rated with asbestos and may generate a problem in the industrial plasters.

We are working on Data Sheets for any of our products which may contain any rated hazardous compounds plus the program we will follow when a request is received.
