

For a thorough understanding
of the subject—read

Principles of Jet Propulsion

By M. J. ZUCROW, Professor of Gas
Turbines and Jet Propulsion, Schools
of Mechanical Engineering and Aero-
nautics, Purdue University

Here, in one comprehensive volume,
are packed all the facts necessary for
an understanding of jet propulsion.
Among the subjects discussed are
Momentum and Energy Relationships
for Fluids, Thermodynamics of Gas
Flow, Thermodynamic Properties of
Air, Airplane Performance Calcula-
tions, The Gas Tur-
bine Power Plant,
The Gas Turbine
Type of Thermal Jet
Engine, Air Com-
pressors, Turbine
Characteristics, The
Rocket Motor, etc.
Fully illustrated with
diagrams, tables and
equations.

1948 563 Pages \$6.50

APPROVAL COUPON

John Wiley & Sons, Inc. 605 Third Ave., New York 16, N. Y.

Please send me on the enclosed approval a copy of
"Principles of Jet Propulsion" by M. J. Zucrow. If I am
satisfied with the book, I will remit the price and
return the book; otherwise I will return the book postpaid.

TEMPLETON RETURN STEAM TRAPS

For Pumping, Boiler Feeding, Draining,
Heating and Vacuum Lines.

Pumps Water at any temperature or
pressure.

Valves and Seats of Stainless Steel.

Sizes 1 in. to 4 in. inlet and outlet.
Capacity 2500 lbs. to 60,000 lbs. water
discharge per hr.

Send us your problems

TEMPLETON BROS.

169 Reservation Road

HYDE PARK 36, MASS.

CRYER TRAPS are fast
in removing initial loads
of air and condensate.

DELIVERY FROM STOCK

Features: (1) Free turning
bell rolling on
roller screw sticks (2) quick vent
for large capacity (3) mechanically
simple (4) bellows plate prevents
sudden surges from lifting bucket
(5) powerful leverage permits use
of large orifices (6) all stainless
steel parts (7) sleeve orifice easily
removed (8) no threads to strip.

No. 20 (1/2" JUNIOR TRAP)

Ideal for a wide range
of applications

All the outstanding features which have established the
superior performance of Cryer Traps are offered in these
compact units which are low in first cost and main-
tenance. Weighs in only 3 pounds and installation can be
made without supports. These traps are designed for
straight through application and are ideal for use with salt
heaters, processing bottles, as well as in food, dairy,
etc.

Cryer also makes Thermometric Radiator Traps as well as all
sizes of traps and repair parts for the line formerly known
as the J-M Bell Steam Trap.
Cryer Traps are available through leading distributors
everywhere.

CRYER TRAP AND VALVE CO., INC.
364 Madison Ave., New York 17, N. Y.
Manufacturers of steam specialties for over forty years.

Sizes 1/2" to 3/4"
Capacity
60 to 25,000 gals.
Pressure 1 to 200 lb.

engineer. In Toledo, Ohio, area the
Industrial Instrument Co., Millbury, Ohio, has
been appointed Ampco distributor. Vernon
Camp and Donald Bennett are principals in
the organization. Gordon E. Brown has been
made district manager of Chicago sales
territory. He will be assisted by Robert R.
Louthain, field engineer. Tom Coghill has
been named development engineer—process
industries in Chicago office.

George E. Grimshaw, manager, Industrial
Insulation Dept., Johns-Manville Corp.,
retired April 1 to establish himself as con-
sultant on industrial insulation.

Armstrong Cork Co., Lancaster, Pa., has
appointed Charles S. Conrad Jr. chief archi-
tect, following retirement of Henry Ben-
cher after 40 years of service. Floyd S. Kline
has been named assistant chief architect.

Joseph R. Lex has been made assistant gen-
eral manager of Progressive Welder Co.,
Detroit.

Henry A. Anderson has been appointed
manager of coupling div. at John Waldron
Corp., New Brunswick, N. J.

Carboley Co., Detroit, has named F. C.
Ritter vice-president in charge of personnel.

C. W. Bird has been transferred to Sher-
port, La., where he will be in charge of
all sales and service for La., eastern Tex.
and southern Ark. area of Bird-Archer
Co., New York 17, N. Y.

Calco Chemical Div. of American Cyana-
mid Co., Bound Brook, N. J., has appointed
D. M. Aumack to newly created position of
manager of effluent dept. Aumack will di-
rect operation of effluent and treatment
facilities at all Calco plant sites.

Thomas D. Endicott has joined staff of
George H. Gibson Co., advertising, 50
Church St., New York 7, N. Y.

Ralph W. Purves and Don Davis have been
given new appointments in financial div. of
B. C. Electric Railway Co. on Vancouver
Island. Purves has been made assistant to
financial officer and Davis control manager
for Vancouver Island div. of the company.

H. K. Ferguson Co., industrial engineer
and builder, has elected following officers of
the company: John Omas III, president;
Otto F. Sieder, executive vice-president and
general manager; Wells N. Thompson, vice-
president; F. R. Edenfield, vice-president;
Frank H. Magg, secretary and treasurer;
Earl Murray, assistant secretary and treas-
urer; and George Collins, comptroller.

Irving J. Harris recently retired as con-
struction engineer at Shasta Dam after 11
years of electrical engineering work.

Stone & Webster Eng'g Corp., Boston,
has appointed William F. Ryan engineering
manager, following death of Dr. A. C. Kild-
garry S. Houghton has been named as-
sistant engineering manager.

American Institute of Electrical Engi-
neers has nominated following official
ticket of candidates for officers becoming

expansion joints

there is only one BADGER

E. S. Badger & Sons Co. is the original and
sole manufacturer of BADGER Expansion Joints

Badger Self-equalizing Corrugated Expansion Joints
should be a "must" on all pipe-line installations.

Because only in Badger Expansion Joints are the
flexing movement and stresses definitely directed so that:

All points of the surface of each corrugation share its
individual load equally, and

All the corrugations share the stress load equally.

With Badger ALL-CURVE Directed Flexing Rings
and Badger ALL-CURVE corrugations, excessive
stresses can't localize in pockets, corners or junctions.
They can't pile up unevenly among the corrugations. They
can't endanger the line or shorten the life of these
expertly engineered joints.

Special Badger methods of forming the corrugations

from a single piece of tubing contribute further to the
strength of these joints, and a special Badger heat
treatment preserves their flexing qualities.

Each corrugation affords a definite standard of
traverse, according to its depth and the diameter of
the joint. This makes it easy to determine the number
of corrugations required to absorb the maximum ex-
pansion of any length of line.

When you install dependable, long-lasting Badger
Self-equalizing Corrugated Expansion Joints, your pipe-
expansion problems are solved.

MADE IN COPPER, STAINLESS STEEL AND OTHER ALLOYS—
Copper for normal pressures and temperatures; Stainless Steel and
other alloys for higher requirements—and where corrosion is a
problem. Single or multiple corrugations—for traverses from a
fraction of an inch upward. Also made in Non-equalizing type
(without rings) for uses that do not require added protection. Send
for Bulletin No. 100 (Self-equalizing) or No. 200 (Non-equalizing).
