

Union Electric Co. of Missouri revamps Ashley Street

Installs 2-285,000 lbs./hr. Riley Boiler Units

As the first step in modernizing their Ashley Street Station, Union Electric Company of Missouri recently removed a large number of straight tube boilers and are installing two 285,000 pounds of steam per hour Riley Boiler Units. These units are equipped with Riley Superheaters, Water-cooled Furnaces, Steel-clad Insulated Settings and Air Heaters and are fired by Riley Pulverizers. Since 1929 this company has installed eighteen 20,000 pounds of coal per hour Riley Pulverizers. These Riley Boiler Units will increase the steam capacity and efficiency of Ashley Street—they will operate 86.6% efficiency at 200,000 pounds of steam per hour.
