Subject: North Bergen Warehouse

On Friday, April 11, 1986, the North Bergen plant received a routine inspection by CNA inspector, Ed Keane. During the inspection he asked what we were doing about the insulation in the warehouse. He was told that we were currently evaluating the situation. He told Cliff Oesch that he would like to have one of their industrial hygienists look at it.

Joel Weingast, CNA Regional Occupational Health Manager, Eastern Region, looked at it that same afternoon. He said that the material should be tested - that it appeared to contain asbestos. He recommended that if it did contain asbestos that it be removed.

Weingast said that he would not be writing a report. Keane will include the warehouse in his report on the plant inspection.
