Subject: Re: Press query -- Admin. Pruitt

Hey Kush, attributable to an EPA spokesman.

"Administrator Pruitt was referencing the CO2 footprint from energy related industries. According to the Association of Air Pollution Control Agencies, from 2000 to 2014, per capita energy-related carbon dioxide emissions were down 18.1 percent on average nationally."

Hello,

I'd just like to follow up on this.

It occurred to me that perhaps Administrator Pruitt was discussing per capita carbon emissions. World Bank data ([link](#)) indeed shows an "over 18%" decrease in per capita CO2 emissions from 2000 to 2014. Was his "CO2 footprint" comment referencing U.S. per capita, and not nominal, CO2 emissions?

I am on a deadline for early this afternoon, if that's possible on your end.

Thanks,
Kush

Hello,

I hope this note finds you well. My name is Kush Desai and I'm a fact check reporter with The Daily Caller News Foundation. I'm currently working on an article fact checking a claim made by Administrator Pruitt on Fox Business earlier today.

At one during his interview with Neil Cavuto, Administrator Pruitt claimed, "we've reduced our CO2 footprint by over 18%, almost 20%, from 2000 to 2014."

EPA data on annual CO2 emissions I was able to find ([link](#)) indicates that CO2 emissions in 2000 were around 5992.4 million metric tons, a figure that drops to 5556 in 2000. This is a 7% drop, it doesn't tie up with what Administrator Pruitt said in his interview.

His figure and the EPA data both, however, indicate significant CO2 emissions declines since 2000 -- can you clarify what specific data source he was looking at for this claim? Was he perhaps referencing a different statistic?

Happy to chat at anytime on the phone as well; **Ex. 6** and also happy to discuss further on any medium off the record or on background as well.

Thanks,
Kush
