Subject: Pictures of the HCC unit.

Contacts: James E. Hayden

Jim, I received the pictures today and will forward them to Jeff Alley. 1] Reactor, 2] Kiln - Catalyst regenerator, 3] Vapor line from the reactor to the Syn. crude column, 4] Catalyst cold storage bin, 5] Catalyst elevator casing. These pictures were taken from the North side of the HCC and you cannot see the personnel elevator. The personnel elevator was on the South side of the structure directly opposite the catalyst elevator casing. Jeff Alley came to visit with me last Friday. He had some pictures which we reviewed. I showed him my old hard hat, goggles and respirator that I kept when I left Chevron. After he left I looked through some old files and found refinery shutdown charts. I have not heard from Alley since he left. I will send him the pictures. Do you have copies? I can reproduce them on my computer.

~~I am turning this email into a hard copy and will keep it in my file.~~
