Even with $11,777 on Anniston's books, we are still some $2,015 over the $3,254/month figure.

I feel that before we proceed much further some basic questions must be answered.

1. Are we, at Anniston, only responsible for the dollar amount remaining on our books? If so, what is the budget framework we are to operate within? $3,254/month?

2. How much more are we going to incur in the 916.07 Toxicological Account over the remainder of 1971? We are now heading toward another $100M plus year. Although Joe Landwehr in his January 20 memo spelled out minimum and maximum levels of possible expenditures, and verbal approval of this was received, we are still heading out of control unless some definite budget guidelines are set. We are definitely not operating within the framework of Jim Savage's December 24 memo wherein he states that he "cannot agree that the Toxicological Account will be $10M/month in 1971."

3. The charges to WGK have been worked out with Joe Landwehr and have been mainly based on his January 20 memo to Jim Savage. Are we splitting costs properly? If we are going to expend dollars the remainder of the year as we have in the first quarter, will the splits remain valid? Perhaps more should go to WGK as our production rates continue extremely low.

If I can be of further assistance, let me know.
