18. Continued . . .

Action taken: Replacement has been and is still done on an as required basis. It was found impractical to do on a scheduled basis. There is a supply on hand.

19. It is suggested that chest X ray for employees involved in all or any asbestos operations should be put on a semi-annual schedule.

Action taken: None to date - upon completion of all precautions presently being taken a review of the operations will be made to determine the frequencies required.

20. It is suggested that the work duties of all employees currently and previously employed in the asbestos department be reviewed and that the work duties in which they were engaged when not in the asbestos department be reviewed and recorded.

Action taken: None - the assignments of all employees are a matter of record.

I hope this will answer any questions involved.
