aerodynamic.

They don't stay in the air stream like this. They come up like this and filter out very high in the respiratory tract and they are gone and they do not represent harm.

Q Okay. So do you have an opinion to a reasonable degree of scientific certainty whether the materials that you collected in the samples, and I think you testified that you collected them from the use of the air hose, the grinding, and from the residue left in the brake drum, are harmful to humans?

A Under the circumstances that we did our tests, the concentrations of material and the material itself did not represent harm to the individual based on both the concentration and on the type of material.

Q Okay, Doctor, I think you testified when we were first talking about your tests that you really did not convert your test results to a time-weighted average; is that correct?
