WORKING GROUP ON HAZARDS TO HEALTH AND ECOLOGICAL EFFECTS OF PCB'S IN THE ENVIRONMENT

EURO 310(3)/2

Brussels, 3-7 December 1973

ENGLISH ONLY

SCOPE AND PURPOSES

In collaboration with the Government of Belgium, the Regional Office for Europe will convene a Working Group to critically review available information on long-term effects on health and ecological effects of PCB's in the environment. In this connection critical pathways to man and the phases in the ecosystems considered susceptible should be identified. Furthermore, an attempt should be made to forecast the effect that the decisions already taken by different Governments and private industries to reduce the use and release of PCB's will have on existing levels in the environment. A review of chemicals substituting PCB's should also be made.

The meeting will take place at the Institute of Hygiene and Epidemiology, Brussels, on 3-7 December 1973. It will be held in the English language only.
