

**First one-day joint system
you can rely on...
even in damp weather**

No matter what kind of weather it is—damp, dry, warm, or cool—you can rely on DURABOND.* This remarkable new one-day drywall joint system can be applied by hand or with time-saving machine tools.

To start with, new DURABOND Joint Compound is self-timing. Just apply it by hand or machine. And, regardless of the weather, the compound is hard and strong, ready for the topping coat in three to four hours... all with less shrinkage. There is no wait, no wonder. Almost like clockwork!

To finish off, the all-new DURABOND Topping Coat is chemically matched to the DURABOND Joint Compound. This vinyl topping material creates a

strong, lasting bond, giving a better base for drywall priming paint.

All this means you can complete joint treatment in a single day—weather or not! Since the joint is completed in *one day*, any minor surface defects can be found by the next day; can be corrected *before* painting—not after.

The new DURABOND Joint Treatment System reduces job call-backs, keeps you on schedule day after day. Here's another example of how we take time to help you make more money. *For more information write 101 South Wacker Drive, Dept. DCI-49, Chicago, Illinois 60606.* *T. M. Reg. U. S. Pat. Off.
