has made it necessary for OCF not only to expand the Berlin operation again in 1968, but also to consider building a new facility in the Southwest.

The only asbestos-free product on the market during the past five to ten years was Multitemp.

The first under asbestos, the first question which must be resolved is the use of asbestos as a reinforcing fiber.

I think we have covered all of this already and we can skip on.

Johns-Manville told us during our recent meeting in Manville, New Jersey, they were surprised we never followed up on our high temperature glass fiber insulation product line, Multitemp. By the tone of the consideration, they seemed to be concerned about this product.

If it were to be placed back on the market, it would be the only asbestos-free product available.

If asbestos threat is real and is a serious threat to OCF's participation in the high temperature
