Re: PCB Analysis

Using standards supplied by Universal Mfg. The following results were obtained.

10TOWA

Sample	PCB in mcg/liter
1. Influent Composite Universal	89 (Note)
2. Effluent Composite Universal	67 713
3. Grab Sample Waste Water PCB Waste Collection Taken 2/11/76	12.6 mg/l (114)

There is a single component in this sample. It is not a PCB type. The calculations are based on 1016 PCB. We Arbitrarily ran lindane for a retention time. It elutes later than lindane. An identification was not made but it is not PCB. Disregarding that peak the PCB content is less than 0.5ppb, actually none is detected.
