

KEENEY PUBLISHING COMPANY
6 North Michigan Avenue, Chicago 2, Ill.

Heating, Piping & Air Conditioning carries the JOURNAL of the ASHAE as well as its own regular editorial section. Its field is that of industry and large buildings. It is devoted to the design, installation, operation, and maintenance of heating, piping and air conditioning systems in plants, commercial, institutional and public buildings.

Each January issue includes a complete directory of commercial and industrial heating, piping, and air conditioning equipment, which lists all products, their trade names, and the manufacturers' addresses. It is the established buying and specifying guide of the industry.

H. P. & A. C. is read by consulting engineers and architects... contractors... and engineers in charge of heating, piping and air conditioning in industrial plants, and other large buildings, federal, state, and city governments, school boards, and public utilities. Most of ASHAE members are subscribers.

Such coverage means, for the advertiser, consideration at all points in the selling of a heating, piping, or air conditioning product... consideration in its selection during the preparation of plans and specifications; in its actual purchase for installation; in its year-'round buying for operating and maintenance requirements. Without waste, the manufacturer of air conditioning products and equipment can reach through H. P. & A. C. those from whom he is seeking the necessary engineering acceptance.

AMERICAN ARTISAN covers the field of warm air heating, residential air conditioning, and sheet metal contracting. Its readers are warm air heating and sheet metal contractors, dealers, jobbers, manufacturers, and public utility companies.

Special features of each issue have been devoted to air conditioning since 1932, when it first became apparent that air conditioning for homes was to be along the lines of the central forced warm air heating system. As a result of the ready adaptability of this type of heating system to all air conditioning factors, hundreds of thousands of homes today have winter air conditioning—supplied through forced warm air heating with air cleaning and humidification. Cooling apparatus can be attached to these systems readily whenever year-'round air conditioning is desired.

Each January issue includes a complete directory of residential air conditioning, warm air heating, and sheet metal products and equipment, which lists all products, their trade names, and the manufacturers' addresses.

The key man in the residential air conditioning picture is the warm air heating and sheet metal contractor—the one man experienced in "treating air" at a central place and getting it properly distributed. And American Artisan is the key publication—because it reaches these key men with information that has made it the recognized authority on residential air conditioning practice.

HEATING & AIR CONDITIONING CONTRACTOR (formerly *Sheet Metal Worker*) is the leading magazine in the warm air heating, packaged air conditioning, ventilation, and sheet metal contracting industry. Its editorial scope includes not only residential heating and cooling work, but non-residential air conditioning and air distribution for comfort and process control.

HEATING & AIR CONDITIONING CONTRACTOR editorial content is directed primarily at the management and planning levels of the heating, air conditioning, and sheet metal contracting business. It covers not only the technical aspects of this field, but also marketing, merchandising, business management and legal problems. It is also the only publication in the field to devote regular monthly space to labor relations.

THE JOURNAL OF PLUMBING, HEATING & AIR CONDITIONING is the recognized editorial leader in the plumbing and heating contracting industry. Through the use of intensive editorial research it has developed a unique formula for building effective readership. A key factor is consistent editorial balance among the various aspects of reader interest: technical, marketing, business management, overall industry issues.

In technical editorial, **The JOURNAL** has consistently been a pioneer. Among the subjects on which it has published the most comprehensive information ever produced are the following: base-board radiation; submersible deep well pumps; hydronic air conditioning for residences and small non-residential structures; water conditioning for domestic and industrial use; etc.

The JOURNAL is also the only publication in its field with a regular monthly section devoted to the labor relations problems encountered by large mechanical contractors in their day to day operations.
