ASBESTOS SCREENING PROGRAM
STATUS OF FINDINGS

As you are aware, this program started in October of last year. It has dealt first with those who, as a result of past job assignments and age, may have been more susceptible to asbestos exposure. A concerted effort was made to review these people. Additionally, as others have been scheduled for their periodic physicals, they too have been reviewed for lung abnormalities. Recently, pensioners have been invited into the surveillance program.

During these past months, a considerable background of understanding has evolved and it would seem timely to review the status after one year. Statistics on the above program have also been requested corporately to gain a measure of the scope of findings. The data needed is as described in Attachment I separated by active employee and pensioner. Some of the numbers, such as total number of active employees surveyed, may not be absolutely available without considerable file review. In such an instance a reasonably accurate estimate will suffice. On the other hand, the number of abnormalities are generally accurately known, and it is important that these numbers be valid. Discretion should be exercised so as to not create an unnecessary burden on the organization.

Would you please send the information as soon after October 1 as available but before October 15 to R. D. Ingalls, Montchanin Building 5625, Wilmington. If there are any questions, please call Bob or myself.
