SUBJECT EXHAUST FANS IN REACTOR BUILDINGS

By reducing the speed on the fans, the conservation of heat would be minimal and the chance of vinyl chloride buildup could be hazardous. I personally do not think that this is the safe way to go.

FROM: L. A. Baker

Regarding Elmer's comments above, I have discussed the matter with Maintenance, i.e. Nissim and Wanker. They feel it could be done but savings would be small. I feel that in light of the new VCM findings, it would not be wise to consider any questionable modifications in this area at this time.
