AUTOMATIC EVAPORATIVE ROOF COOLING

Distributors and Dealers in Principal Cities

WATER COOLED ROOFS PREVENT SOLAR INFILTRATION

U. S. Government Office Building COOLED with APRIL SHOWERS

SURFACE COOLING has many converts. **THESE** installations show the trend toward space cooling by the sprayed surface method. Hundreds of installations, from Boston to Los Angeles have been made. The systems are automatic, and very little water is required:

Country Life Press Corp., Garden City, L. I.	90,000 sq ft of roof
Hallcrafters Co., Chicago	140,400 sq ft of roof
Lily Tulip Cup plant (Westinghouse air conditioned), Augusta, Ga.	104,000 sq ft of roof
Ponemah Mills, Taftville, Conn.	52,015 sq ft of roof
Aerojet Engineering Corp., Azusa, Calif.	22,000 sq ft of roof
Westinghouse Electric Company, Hyde Park, Mass.	12,544 sq ft of roof
General Electric Corp., Providence, R. I.	8,538 sq ft of roof
Bulova Watch Co., Providence, R. I.	31,000 sq ft of roof
Magnolia Paper Co., Houston, Tex.	37,576 sq ft of roof
Telechron, Inc., Ashland, Mass. (repeat orders)	54,500 sq ft of roof
Weston Electrical Instrument Co., Newark, N. J.	24,000 sq ft of roof

A FEW DEALERSHIPS STILL OPEN

APRIL SHOWERS is the trade name of an **EFFICIENT** fool proof method of preventing roof heat penetration or solar infiltration causing excessive heat in upper floors and in factories, stores, theatres, shops, etc.

City water under normal city pressure is usually adequate to serve your **APRIL SHOWERS** system. The sun operates it. Roofs **LAST LONGER**, greater comfort is assured, production during the summer's heat is kept apace, errors through fatigue are avoided, and **MANAGEMENT** acclaims **APRIL SHOWERS** a **GOD-SEND**.

Developed in 1933-34.

APRIL SHOWERS controlled roof cooling is protected by U. S. Patents; beware of imitators or infringers. **USED BY AIR CONDITIONING ENGINEERS** to cut solar load.

APRIL SHOWERS new residence heads now ready.

Cooling Towers

Foster Wheeler engineers have had wide experience in the design and construction of high-efficiency cooling towers for service under any climatic conditions. FW towers have been constructed all over the world to meet the cooling requirements of a variety of industrial needs, such as those encountered in chemical plants; public utilities; textile manufacture; office buildings and department stores; and oil refineries. Careful study of each proposed installation is undertaken before recommendations for the most suitable tower are given.

Left: Three of five induced draft towers, introduced by Foster Wheeler and installed in 1933 on the roof of the R. H. Macy department store in New York City. The first two towers cool circulating water for the condenser of a turbine; the other towers, only one of which is shown, cool water used in Macy's air conditioning system.

Vacuum Refrigeration

Schematic diagram showing arrangement of a typical vacuum refrigeration system. These systems, which cool water by subjecting it to high vacuum, supply chilled water for air conditioning or refrigeration. When a sufficient quantity of steam is available, vacuum refrigeration systems have several outstanding advantages—low initial cost; low maintenance cost; no toxic, explosive refrigerants; and, exclusive of pumps, no moving parts. Entire units designed and constructed by Foster Wheeler.
