C-B SYSTEM OF CONDENSATE DRAINAGE CONTROL

"JET" principle speeds production, reduces fuel and improves product quality. Removes "mud" of condensate from steam-processing units, most intensifying latent heat transfer, reduces fluctuations, eliminates scale, reduces processing time, returns condensate to boiler, "make-up" system without open, stable temperature or pressure, low maintenance costs, cut repairs, gases and air automatically separated from returned condensate. When You Need Compressors THINK OF PENNSYLVANIA

PENNSYLVANIA air and gas compressors for general service and special applications are all equipped with AIR CUSHION valves, known for economy of operation, maintenance and long useful life. They are OIL-FREE in lubricated and oil free designs for 100 to 6000 psi and also as dry vacuum pumps.

Capacity ranges from 1/4 to 15 H.P. in piston displacement and from 1/4 to 15 H.P. in dry vacuum pumps.

They are built to the highest standards of design. Furnished in single, tandem and duplex construction, they may be powered by motor, self contained steam or turbine drive in horsepower ranges from 10 to 350 BHP.
