SUBJ: PVC LABELING

VISTA

Unanimous approval has been received for proceeding to label PVC product containers. Several comments regarding the specific label content were received and some modifications made. The final label content is attached. It is recommended that the full label text be printed on hopper car and truck tags, if feasible.

I am working with PVC business and marketing areas to develop and communicate the necessary action steps to achieve the labeling. You will be contacted in the near future regarding those details.

SUBJ: PVC LABELING

VISTA

Aberdeen currently places the OSHA required VCM warning on PVC containers of all product exceeding the 8.5 ppm on criteria level. This practice will have to continue in addition to the new PVC labeling.

The VCM warning incorporated in the new label is intentionally different from the language required by the VCM standard. Legal has reviewed the language for both and advises we continue the current practice in addition to the new label.

Please call if you have questions regarding the details of the above.
