CONFIDENTIAL

ABERDEEN PVC PLANT

RAIL YARD FALL PROTECTION

Description:

This project will install supports and a cabling system in the new rail yard for fall protection when employees are required to access the top of a rail car. This system will be similar to that being installed in Plaquemine.

Justification

This is a safety project. Currently there is no protection for employees to prevent them from falling off the top of a rail car in the new rail yard. Employees are required to access the top of rail cars in the rail yard in order to vent the rail cars when loading bulk trucks for the NAP Prairie plant.
