DATE & SUBJECT:	July 1, 1987	RESTRICTED AREA FOR ASBESTOS WORK

Capital Project IQ-456 has been approved for the repair of thermal insulation at approximately 80 locations throughout the plant. This work is currently being performed by contractors and will last several months.

During the course of this work, regulated areas will be established whenever asbestos containing dust could be generated. These areas will be clearly marked with barricade tape and signs stating:

DANGER
ASBESTOS
CANCER AND LUNG DISEASE
AUTHORIZED PERSONNEL ONLY
RESPIRATOR AND PROTECTIVE
CLOTHING
ARE REQUIRED IN THIS AREA

Only properly protected contract personnel are permitted inside these areas.

Please advise all personnel that no Reynolds employee is authorized or permitted inside these restricted areas without proper protective equipment and specific approval from his supervisor.

If access into a restricted area is required, please contact Project Engineer Bill Hamblin, EXT 2264, and he will arrange for the insulating contractor to cease work and clean the area before allowing access.
