

Eaton Strength in

Eaton[®] axles can handle virtually any application. It's a fact, we have more single and tandem drive axles for more trucks than you have jobs for. Here's proof... just some of the many axles Eaton offers.

23,000lb. Single Drive Axles

Our 23 Series is designed for over-the-road fleets for use alone or with tag or pusher axles. Built to handle up to 110,000 lb. GCW. Spec yours in single reduction, planetary double reduction or two-speed; including 3.55, 3.70, 3.90 or 4.11 ratios for fuel economy; up to 6.67/9.08 for maximum reduction and performance.

Available 3rd quarter, 1980.

38,000lb. Tandems

Our D380 is built for line-haul operations up to 130,000 lb. GCW. The only 38,000-lb. tandem with an optional lube pump (D380-P), you can spec yours with single reduction, dual range, or double reduction ratios, including the new 3.55, plus the 3.70 and 3.90 for economy.

40,000lb. Tandems

Our D400-P, standard with an inter-axle differential lube pump, is designed for maximum loads on-highway (up to 140,000 lb. GCW). Choose from 12 single reduction ratios, 10 double reduction ratios, or 10 dual range ratios to match your application, your need.
