

Mark Riddle/Robert Kozlek - Texas City

December 20, 1984

Hourly Safety Committee Task Force
Improvement of HCN Emergency Warning
System

R. T. Hammann

Bob:
I need to talk
with you on this - this
has not been discussed
with anyone
Mark
2/1/85

The following are ideas and suggestions developed by Robert Kozlek in conjunction with the employees of the HCN complex:

1. Consider installing a stop light located east and west of the T10's on Main Street. This could be a series of alternating lights that would readily improve visibility during the daylight hours.
2. Change all the blue lights to red to improve visibility in the daylight hours.
3. Another alternative would be a series of lights that would automatically flash when the HCN alarm goes in.
4. Install swinging gates at the major roadways that could be manually put down across the road that would keep people and vehicles out of the area.
5. Change the signs facing into the unit to read "HCN Alarm - Do Not Enter Area When Light is Flashing". The other side of the sign would still read the same which would be "HCN Alarm - Leave Area When Light is Flashing".
6. Consider a special plant-wide alarm for any HCN emergency.

For HCN area install stop signs & cross walk on "Main Street" across the T10 area
(may not need due to lack of storage area)

Mark Riddle

- lowering lights/signs
- stripe street & post
"slow" signs

Robert Kozlek

Note:

We need to respond to HSC concern by
Feb. meeting
