KOOLPORE

GRINDING WHEELS

These BAY STATE abrasive products, manufactured with large pore spaces are especially suitable for SURFACING and TOOL and CUTTER jobs that require extra coolness of cut and heavy, fast removal of metal.

Our sales and distributor representation is located in nearly every principal city. Let them, and us, solve your grinding problems.

R/M BRAIDED ASBESTOS ROPE

The doors on furnaces, gas generators, and many other types of equipment require a dense, strong packing that will resist temperatures up to 600° F. and furnish a tight seal.

To meet these conditions, and as a variant from ordinary braided asbestos packing, R/M engineers designed the asbestos rope, shown above. It is furnished either in solid braided construction without a center core, or with a single or double braided asbestos jacket over a twisted asbestos rope center. All types are available either treated or dry, ready for oiling and graphiting in the engine room to the user's specifications.

These different types of braided asbestos ropes are just a few of the hundreds of R/M packings which are available through your authorized R/M distributor. For every type of equipment, for every service, R/M has a specially engineered packing of selected materials and of proved performance.

You can count on LIBERTY... to solve your Dust Control Problems

When The Mengel Company purchased a factory in Union City, Ind., they found the dust control system inadequate for increased production. Liberty Engineers were called in and after a thorough analysis of the plant layout, they designed and installed a complete dust control system engineered to meet the exact requirements of the plant.

One of the features of this installation was the 115 foot span of 12 inch pipe supported by an overhead suspension cable to take the place of ground supports which would have interfered with traffic.

This Union City installation was a repeat order—one of many dust control systems designed and built for The Mengel Company over the past eighteen years. It is

just another example of how manufacturers utilize Liberty's specialized engineering "know-how" in dust and fume control.

Regardless of whether your plans call for relocating your present equipment or installing a complete new system, Liberty Engineers are ready to assist you in planning efficient dust control tailored to meet your particular needs. Write for complete information.

THE HIGH PRESSURE PACKING WITH THE LOW MAINTENANCE COST

GARLOCK 150

Low in maintenance cost because it gives such *long, dependable* service. Costly shut-downs for frequent repacking are avoided. Man hours and machine hours are saved. Use GARLOCK 150 on piston rods of engines, pumps, compressors, etc., against steam pressures up to 300 lbs.

A Plibrico Jointless Firebrick Lining is
all one piece—as though it were
carved from a single brick of
highest quality.

Typical Plibrico lining in connection with a gas-
fired boiler. Plibrico is installed in plastic condi-
tion, trimmed smooth, then baked out by the fire.

The Furnace lining that is *All* refractory

● Your first and foremost reason for using Plibrico furnace linings is summed up in the one word "monolithic". A Plibrico lining is totally free from the countless joints that signal the ultimate failure of any laid-up fire brick lining. It is like a lining carved from a single fire brick of highest quality. It is *all* refractory!

Proved superior from the start, we have never deviated from this basic principle of jointless construction. But each year has shown ways of putting this better principle into ever better practice.

Plibrico construction methods today include patented Flexo-Anchors which hold Plibrico walls securely in place; Taperlok supports which permit sectionalizing Plibrico walls at minimum

cost; methods of readily constructing air-cooled walls at moderate cost; methods of forming door, ignition and suspended arches that stand up in service.

Guiding every Plibrico installation is the broad experience of an engineering staff with a proved record of creating furnace designs capable of obtaining maximum efficiency with any given combination of boiler and fuel-burning equipment.

Your local Plibrico Sales & Service engineer is in a position to give you the full benefit of Plibrico refractories, Plibrico engineering, and Plibrico installation service. If preferred, your own men can install Plibrico products supplied from local stocks. Ask for big Plibrico catalog, specifying edition covering water tube or H.R.T. boilers.
