Report of Meeting of the Task Group on
Naturally Occurring Inorganic Fibers of
ASTM Committee E-34

A copy of the agenda for this meeting is attached. A list of meeting attendees is also attached.

Most of the meeting was devoted to review of the tenth draft of the Standard for Occupational Exposure to Asbestos. After the resolution of a few minor points in the draft, the meeting was confined to a discussion of the exposure limits that ASTM would recommend. It was finally agreed that this could not be resolved at the meeting, and that it would be necessary to ballot by letter all members of the Task Group to determine which of the two following proposals should be adopted.

1. All Uses - 2 fibers longer than 5 microns per cubic centimeter 8-hour time-weighted average.

   10 fibers longer than 5 microns per cubic centimeter ceiling concentration.

2. Mining and Milling - 5 fibers longer than 5 microns per cubic centimeter 8-hour time-weighted average.

   10 fibers longer than 5 microns per cubic centimeter ceiling concentration.

   Product Manufacturing and End Use - 2 fibers longer than 5 microns per cubic centimeter 8-hour time-weighted average.

   10 fibers longer than 5 microns per cubic centimeter ceiling concentration.

The meeting was adjourned at 12:00 Noon. The next meeting was tentatively scheduled for March 8, 1977 at Kennedy International Airport in New York City.
