Gentlemen:

For your information a copy of a report is attached describing the benefits to the public arising from the use of polychlorinated biphenyls in the electrical industry. This report together with a letter of transmittal by J. F. McAllister (also attached) was sent to Dr. Edward J. Burger, Jr. of the Office of Science and Technology. Additionally, this report was also made available to the National Industrial Pollution Control Council at a meeting on January 3, 1972 and will also be made available to ANSI Committee C-107. It was prepared entirely by General Electric personnel (see attachment labeled "Preface" which was not submitted with the report).

It is our understanding that Westinghouse made a report entitled "The Need For Continued Use of Polychlorinated Biphenyls As Electrical Insulating Liquids" available to the National Industrial Pollution Control Council but did not submit it to the OST as we did. Copies of the Westinghouse report will be forwarded as soon as available.

Very truly yours,

E L Raab
