[Meeting NRK 20220211.docx](#)

Hi [redacted]
Meeting notes attached, with some additions on masterbatches and the boron nitride alternative, also another possible alternative from US company Zume.
Unrelated to this, looking through a few websites that also mentioned paper, I was struck by the thought that the teflon coaters maintain that their products lead to reduced use of fats in cooking, whilst use of PFAS in pizza boxes and like does the exact opposite – keeps more fat in the product. Fat stained cardboard also makes you question what is in your takeaway!
