C-227

MEMORANDUM

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
PUBLIC HEALTH SERVICE
FOOD AND DRUG ADMINISTRATION

TO : Members and Consultants. Asbestos Protocol Subcommittee of the HEW Committee to Coordinate Toxicological Research and Related Programs

DATE: May 1, 1974

PLAINTIFF'S EXHIBIT DUP-850

FROM : Raymond E. Shapiro, Ph.D.
Chairman

SUBJECT:

0121

I am enclosing a set of reprints from Dr. Ian Munro which are of interest to all Subcommittee members and consultants.

I would suggest that our next meeting be held the end of May or the beginning of June. Items which should be considered at this time include:

1. Discussion and answers to the outside criticisms of the Working Draft.

2. Refinement of the Working Draft in terms of the new information we have received since our last meeting, with particular attention to choice of species.

3. Possible means of interpreting and extrapolating positive and negative results.

4. The problem of asbestos fibre size and characteristics.

5. Other agenda items that members and consultants feel should be brought before the full Subcommittee. Please bring your list.

As we want to have as full discussion as possible, please allow for a two day meeting.

Enclosures: 4

Accredited laboratories . . .

0122

The following laboratories have been accredited under the Laboratory Accreditation Program of the American Industrial Hygiene Association

Proficiency testing is an integral part of the American Industrial Hygiene Association's laboratory accreditation program and is required by the laboratory's participation in the NIOSH Proficiency Analytical Testing program (PAT). This program at present includes bimonthly samples for lead, cadmium, zinc, asbestos, silica and organic solvents. The following solvents are provided on a rotating basis: carbon tetrachloride, benzene, trichloroethylene, p-dioxane, toluene and chloroform. Accredited laboratories are required to analyze all materials in the PAT Program which they analyze as a part of their routine operations.

The following key indicates those PAT materials analyzed by each laboratory

1 Lead
2 Cadmium
3 Zinc
4 Asbestos
7 All PAT materials (1-6)
5 Silica
6 Organic solvent
