SUBSTITUTE FOR ASBESTOS TAPE

Tapes of Nomex® aramid are being developed as substitutes for the one- and two-inch asbestos tapes which are used as insulating wraps by plants and laboratories. ("Nomex" fiber is produced at our Spruance Plant.) Preliminary studies indicate that tapes of "Nomex" will provide improved insulation capability at approximately the same cost as asbestos.

Development quantities in one- and two-inch widths will be available in early 1st Quarter '76. Because of limited quantities, Du Pont locations are being given the opportunity to evaluate this material first.

Free samples will be shipped to Du Pont locations that want to participate in the evaluation. If you want to participate, return the attached questionnaire to me. Priority will be determined by the date the completed questionnaire is received.

JAB/dlw

Attachment

Also, welding sleeves.

SPB —

What is an exposure limit to Nomex?

We use it now for hot suits in Aviation and in 440" protective hoods and jackets. If it is a inhalation problem we need to check what we are doing now.

I have previously contacted Blankinship (ca 12/1) and asked to be included in the test program.
