ACOUSTICAL PLASTER

7/10

A. H. Ten Elshof

PLAINTIFF'S EXHIBIT

GP-426

CC: Mr. C. G. Shuttleworth, Paoli

We have on hand the following special raw materials for use in manufacturing acoustical plaster of which we have shipped only .8 tons.

7-D Asbestos Fiber	59589 lbs.
Bentonite Clay	29784 "
Tetra Sodium Pyro Phosphate	198 "
Ultraset D.S.	356 "
Bags	2220

The purchasing department ordered the first two raw materials in large lots because of cost factor for small quantities because of freight. We understand the Bentonite clay is not useable after 90 days and this was received May 22 and therefore good for only another 30 days or so. It costs \$.95 per cwt. and not too much is tied up in it. We ran four experimental batches for the general laboratory just this week and this will probably have to be thrown out before too long. Mixed material has still less life.
