SUBJECT Capital Equipment Needs for 1972
Quality Control Laboratory

The following is the capital equipment desired to be purchased for the fiscal year 1972:

1. Hazemeter Sensing Unit and Automatic Measurement Unit

Approximate Cost: 2.5M

Improved analysis capabilities for Plastisol film clarity can be achieved with this instrument. In light of our recent clarity problems with some customers, this instrument could be very useful in reducing customer complaints by detecting problems before they become serious.

2. Multi-Angle Glossmeter

Approximate Cost: 1.5M

This instrument could be used together with the Hazemeter for clarity testing and would also be useful for determining high or low gloss materials for customers desiring one of these properties.
