December 6, 1968

Dear Joseph C. Calandra
Director
Industrial Bio-Test Laboratories, Inc.
1810 Frontage Road
Northbrook, Illinois 60062

Dear Joe:

Enclosed are several items to bring your files on the Aroclor problem up to date. These are:

1. A copy of a paper "in press" by R. W. Risebrough and two letters relating thereto.

2. A second paper by Risebrough which was presented at the Rochester conference last June. This is almost identical with his proposed publication. I have marked up the copy but hope you can ignore the red ink.

3. A copy of the publication in "Science" (Oct. 1968) which deals further with the effects of chlorinated hydrocarbons on the shell thickness of eggs. In two places it is pointed out that the residues were not analyzed for polychlorinated biphenyls.

4. A copy of the letter to Bill Hunt from FDA. I included this because it does have some data relative to possible dietary levels for the proposed studies with hens.

I will be sending you separately a copy of my "minutes" of our discussions today and a letter authorizing initiation of some of your studies. Of course, I will not forget project numbers!

It was good to see you here in St. Louis and I hope you and your family have a happy holiday season.

Sincerely,

DSW 034680

Elmer P. Wheeler
Manager, Environmental Health
