THE STATE BOARD OF HEALTH
OF MISSOURI
JEFFERSON CITY

December 4, 1944

Dr. Robert A. Kehoe
Kettering Laboratory of Applied Physiology
College of Medicine
University of Cincinnati
Cincinnati, Ohio

Dear Dr. Kehoe:

According to our short meeting in New York at the A. P. H. A. meeting you were kind enough to allow us to write you for advice.

The present stage of my lead program consists of only blood leads with no urinary lead determinations at all. I would be very grateful if you would send me information concerning the type of container, precautions of sampling and interpretations of results. I presume the container should be pyrex, as are our tubes for blood samples.

As you know, we offer not only a diagnostic service to small plants, but a laboratory service to the plant physician or physician on call. For economy, we send them simple petroff needles with pyrex oxalated tubes. We would like to include urine determinations for them as well.

We would appreciate your sending us any available reprints of the work of your laboratory. As soon as the various kinks are worked out, I would like to send you our state program in lead for your approval.

Thank you for your kind consideration of these problems.

Respectfully,

A. Link Koven

A. Link Koven, M. D.
Industrial Hygiene Physician
