subject Label Form #F6017 Asbestos
Cement Caution Notice

Reference is made to W. H. Newton's letter of December 29, 1977, to J. E. Sliwinski regarding re-printing of the caution label for asbestos cement products.

The original and revised caution label was developed with the best information possible with apparent consideration of Marketing impact. I believe that the caution label, as currently written, is not sufficiently accurate or complete enough to assist the user. In other words, we tried to cover the federal regulations in a few lines and this is misleading to the customer user. Example: The asbestos fibers are not permanently bonded in portland cement (they can be released).

I recommend that the caution label be revised to delete all the wording except the OSHA caution notice:

CAUTION
CONTAINS ASBESTOS FIBERS
AVOID CREATING DUST
BREATHING ASBESTOS DUST MAY CAUSE
SERIOUS BODILY HARM

NOTE: I talked to Johns-Manville and they use this same caution label, printed on 8" x 10" sheets and one sheet is inserted between every flat sheet; they find this necessary since often times the flat sheet stacks are split. I think this is a good procedure.

J.M. also makes available to all their customers a complete package on Recommended Work Practices - shop and field fabrication of asbestos sheet products. You will note that this carries many helpful hints and complete OSHA regulations. I believe this is a good pattern since too little information in the users hand could be harmful and by providing a complete package, the manufacturers could not be accused of failing to provide sufficient information to safeguard the health and safety of the user.

I would suggest that C.B.B.P. follow a program similar to that of J.M.

A copy of the J.M. literature is enclosed for your use. Since this is the only copy, I request its' return for our files.
