SUBJ: TSCA ALCOHOL REREGISTRATION CONSORTIUM MEETING OF JANUARY

15.

VISTA

The subject meeting was attended by representatives from Cochran, Drexel, Fair Products, Coastal Chemical, Uniroyal, Ethyl, and Vista. Helena, P & G, and Henkel were not present. P & G and Henkel had indicated that they would technically support the effort but would not attend the meeting. No one had heard from Helena so it is not clear what they plan to do. Below are highlights of the meeting.

1. A consortium will be formed to develop the data needed to reregister 8 and 10 alcohols at least. Cochran expressed a desire to obtain a reregistration that would cover a C_6-C_{12} range. Most others present felt this would be difficult but Cochran can use the 8 and 10 data developed in any way they wish.
2. An 810 blend will probably be used for testing and an attempt made to demonstrate that this data adequately represents both.
3. Gene Cochran was elected chairman and Hurley Hathaway (Cochran) and Louis Haefele (Drexel) will function as the technical committee.
4. Uniroyal is still undecided as to whether they will join the consortium or not. They may claim a formulators exemption and "pay the price" in the future if they wish to use consortium data.
5. The consortium signed our document reserving our data use right, however this was done outside the meeting with no open discussion on the matter.
6. The consortium asked that we not cancel our registration but transfer it to the consortium, or if the consortium is not yet a legal entity, a consortium member (probably Coastal) who would transfer it to the consortium of a later date. They wish this to happen just in case they need a technical (active ingredient) as well as a formulated product registration. In effect, they would then reregister our "labels" as well. I don't fully understand their concern but told them we could do that if I can figure out how to do it and meet our January 24th filing deadline.

Regardless, we would provide them with the use of any of our original data they need to support reregistration.

7. Louis Haefele reviewed his assessment of the data needs with the group. This is attached for your reading pleasure. Bottom line is a cost ranging from 350,000 to 1,500,000 depending how persuasive we are on the "conditionally required" tests arguments.

Also, some interesting issues were discussed. Some test requirements are determined by the results of an octanol/water partition coefficient. Obviously, octanol is very soluble in octanol and tests results would be indicative of the need for more testing.

Another similar problem is the testing requirement for vegetative vigour or growth inhibition. TSCA alcohols are growth inhibitors by design and will "flunk" these tests.

We (they) will make technical arguments against the applicability of these test and hope reason prevails.

8. In summary, Vista will be asked for the following:
- a. Transfer registrations to Consortium vs. a voluntary cancellation
 - b. Alcohol samples
 - c. Physical and chemical measurements on the samples and possibly the blend to be tested.
 - d. Use (without compensation) of existing registration data if needed.
 - e. General technical assistance such as reviewing toxicology testing results.

I did make the point that we were depending on the consortium to do the reregistration well and successfully because we were all at risk if they didn't. I think the members have the experience to do this and along with our technical help they can.
