Color can be tranquil — summer horizon

Grass, so green...outside! The same soothing green...inside! Hospitals have found that it pays to duplicate outside colors, inside, and thus speed recovery.

Green—restful and the proper color for a hospital. A different color may be required for other needs. Turquoise and even shades of red and orange, may be recommended for special purposes.

It is the business of our Department of Color Research and Decoration to study the painting problems of hospitals and recommend color treatments designed to meet particular requirements.

The choice of color depends upon many different factors—size of room, exposure, furnishings, purpose, and type of lighting. The Department of Color Research and Decoration will gladly study the conditions which must be met in your hospital... and then make recommendations based on its study and its experience with color problems in hundreds of different hospitals.

Why not drop a line to the Department today? Simply outline your problem and a prompt response will follow. Address the Department of Color Research and Decoration in care of our nearest branch office.
