

1 brake repair doesn't generate that much dust on days
2 when there is very little brake service activity,
3 correct?

4 A Yes.

5 Q They go on to say that if there is more than
6 very little brake service activity, they would expect
7 asbestos exposures to be higher, correct?

8 A Yes. Maybe a little bit higher. I mean, we
9 have seen studies -- we have seen the German study,
10 the Finland study, the Hong Kong study, the study in
11 Pennsylvania.

12 All of those studies indicate that the
13 time-weighted average exposure for garage mechanic
14 would be less than .05 fiber per cc.

15 Q Well, we are going to get to those studies
16 in just a moment. But for the moment, you do agree,
17 do you not, sir, that in this NIOSH study that there
18 was very little brake work going on when they did this
19 study that you rely on?

20 A I have a few NIOSH studies that I rely on.
21 One of them they choose the wrong day.
