Attached are HB-40, Biphenyl, Liquid Aroclor and Solid Aroclor container specifications. Estimated container requirements for 1971 are given, along with photographs of 9 of the containers. The above products are packaged in 16 different containers, ranging from paper bags to steel drums. Bags of 4 different physical dimensions are used. These dimensions are given on the specification sheets.

Table I shows the estimated 1971 container requirements, Monsanto code number and what is packaged in each container. Part of this data was obtained directly from TSD Job No. 370-720 Report #1 and part was calculated based on present usage expanded to meet 1971 requirements.

Table II refers to the attached container photographs and gives a brief description of each container pictured, along with the code number. There is not a photograph of every container because several of them differ only in the types of inner lining used or in the case of Biphenyl bags, the printing on the bags is different.
