ASBESTOS SEMINAR - FOLLOW-UP

We greatly appreciated your efforts at our Asbestos Seminar. I can already see that the work you have done in this area has brought positive results in many of our PP&R plants.

As I discussed on the phone, we would like your assistance in preparing more detailed information for several requests that were asked during the meeting. These are:

- List of recommended equipment to be used as vacuum cleaners or local air exhausters. Copies of vendor's literature would be valuable.
- More detailed information on the hazard potential of handling various gaskets which contain asbestos that is bonded to various degrees. A table listing the more common gasket types and exposure potential from handling or cutting would be very helpful.

Charges for your time will be initially on the existing Work Request; a Part II will be added if necessary.
