SUBJECT: RECENT FEDERAL REGULATIONS ON ASBESTOS FIBERS

Today Mr. Bergeron called and informed me that an inspector on a project using Panelstone asked to learn why we were not properly identifying our Panelstone. He stated that it was a federal regulation that any material containing 5% or more asbestos fibers must be identified with a label cautioning the user that this material contains asbestos fibers and may cause serious bodily harm. I called Dave Lucy of Johns-Manville to see if he had any knowledge of this new regulation. He informed me that he had heard about it within the last two weeks but he has not seen any official document.

I am enclosing a 8" x 11" caution bulletin that was sent to us by J/M which might serve as a form notice to be put with each pallet of material being shipped. Dave asked me to send a copy of this caution bulletin to him to be submitted to their Legal Department to see if this is acceptable for J/M's use.

I am assuming that we will take comparable action and have some suitable bulletins printed for our own shipments.
