Toxicity and Safe Handling of Aroclors
Krummrich Plant

Ken Boucher -
Krummrich 1740

In reference to the Process Engineer's Handbook which we discussed by phone last week, I am sending the enclosed toxicological and environmental information photocopied from an earlier Aroclor® Plasticizers Technical Bulletin. This type data would probably be appropriate in this case for relating the toxicity and safe handling of Aroclors.

Note I have deleted the word "plasticizer" since we now only manufacture the product for use in closed systems such as transformers and capacitors.

Again, let me stress that such information is generally available in your plant Safety Department and that requests of this kind should first be directed through them. Then if additional information is required, Corporate Medical will of course, provide any assistance needed.
