SUBJ: VCM BY-PRODUCT STREAMS OPTIONS/RECOMMENDATIONS

VISTA

Joe Ledvina and I have discussed the Team's conclusions and support your recommendation. It appears to be the best option from a capital expenditure and timing basis. Although the cost of \$200/ton for the heavy/light ends is substantial, it seems to be our best and most stable option until we can gain the capability to handle these streams in-house. As our experience has shown, to further delay this decision will only result in further escalation of costs.
