ELECTRIC VEHICLE HAS ASBESTOS ON BRAKES

(Have been discussing an electricity-powered garbage collection vehicle as an anti-pollution device.)

MAN: Well, the car doesn't - the truck doesn't run when you're not moving. In other words, there's no pollution being made when you're not moving.

CHRISTOPHER BLATT: Do you make pollution when you are moving?

MAN: No, no. We have a hermetically-sealed motor, and there's no ozone coming from that. When you stop, there's a little bit of asbestos pollution from the brakes, which is normal with any automotive vehicle.

BLATT: We wouldn't - do we consider that to be a major source of the asbestos pollution that we're beginning to hear a lot about?

MAN: Well, the same amount that any truck would give, perhaps a little less on this, because we normally brake with the motor.
